

ABSTRACT

A packaging and applicator device may include at least two receptacles. Each receptacle may contain one of a cosmetic and a care substance, a body, and a removable closure cap. The device may also include at least one coupling member capable of uniting the two receptacles in line with each other. The coupling member may be at least partially elastically deformable, and may include at least one housing. The at least one housing may be configured to receive at least part of one of the receptacles and enable the part of the one of the receptacles to be fixed to the coupling member.
